INTRODUCING OUR NEW  
CNC FIBER LASER

Our Yawei HLF-1530 Fiber Laser Cutting Machine has a 3kw capacity with a cutting range of 3000mm x 1500mm. We have the ability to cut various types of metal including Mild Steel, Stainless Steel, Aluminium, Brass & Copper. The machine is highly accurate and precise and can handle any projects of almost any complexity. This is due to it's ability to work on very thin to thick gauge of material and cause very little warping or distortion to the area being cut.

MATERIAL	MAX THK - MM	MAX SIZE - MM
Mild Steel	20	3000x1500
Stainless Steel	12	3000x1500
Aluminium	12	3000x1500

Laser cutting can be used for a huge variety of different tasks, including drilling, marking and engraving without the need to replace or switch tooling. See below some of the project capabilities;
